

# Implementing gradient descent for multiple regression

## 5 试题

1.

What is the value of the weight for `sqft_living` from your gradient descent predicting house prices (model 1)? Round your answer to 1 decimal place.

281.9

2.

What is the predicted price for the 1st house in the TEST data set for model 1 (round to nearest dollar)?

~~356774~~

3.

What is the predicted price for the 1st house in the TEST data set for model 2 (round to nearest dollar)?

366651

4.

Which estimate was closer to the true price for the 1st house on the TEST data set, model 1 or model 2?

Model 1

Model 2

5.

Which model (1 or 2) has lowest RSS on all of the TEST data?

Model 1

Model 2
